**SAPHENEIA, INC. and SCANNERSIDE join forces to offer the Best Value for Dose Tracking and Dose Reduction in Radiology**

**DENVER, Colo., USA** –Sapheneia, Inc., a global medical software developer, has partnered with Scannerside to provide a Comprehensive Dose Strategy (CDS) to the medical imaging industry.

The CDS monitors dose, optimizes image protocols, reduces dose with ClearCT™ and includes XR-29 software upgrade options. This process also includes a patient awareness program, DoseCard™, along with community outreach and education materials.

William Moore, MD and Ronak Talati, MD co-founders of Scannerside, concur, “The partnership with Sapheneia is a natural fit. Sapheneia shares similar patient and business values and has developed its own safe, reliable software since 2006.” The partnership aims to provide the most comprehensive dose solutions at the most competitive pricing, which includes a low monthly fee SaaS package.

Paul Stashick, Sapheneia CEO, states, “We are excited about our new value proposition to the medical industry providing a streamlined single-source solution for installation and ongoing service support based on our customers specific needs. We will pass these savings onto our customers and launch new software products in the coming months to further reduce the service cost while extending the life of CT scanners — and most importantly, providing the best patient safety.”

**ABOUT SAPHENEIA INC.**

Sapheneia Inc. is a U.S. global technologies company specializing in diagnostic and analytical image processing solutions, among other innovative imaging products. For nearly a decade, Sapheneia has been in routine clinical use at major hospitals and imaging centers worldwide, supporting CT scanner systems from all manufacturers, including GE, Philips, Siemens, and Toshiba. The solutions provided by Sapheneia range from its Comprehensive Dose Strategy (CDS) for X-Ray, NM and CT to supplying some of the world’s largest equipment manufacturers, software for ultrasound and other modalities.

**ABOUT SCANNERSIDE**

Scannerside software was developed in conjunction with Stony Brook University by practicing radiologists William Moore, MD and Ronak Talati, MD. With the objective of creating practical solutions by doctors for doctors, Scannerside has one of the most effective, affordable and reliable dose-tracking systems in the industry. This system is constantly being improved with real time, cloud-based analytics. Scannerside continues its forefront market position by monitoring compliance laws and building applications that satisfy the current legislation with rapid product deployment.
