Effective date of Upgrades

RightDose Inc. Manufacturer of RightDose XR29 Upgrades were created by a practicing radiologist for distribution by Sapheneia/Scannerside with a simple dose monitoring device to make your CT scanner compliant with the XR-29 MTA/NEMA standards, CMS and Joint Commission on the Accreditation of Healthcare Organizations (JCAHO) and dose monitoring requirements. It is considered non-invasive, meaning no changes to the CT scanner hardware or firmware are required. The external switches and software are manufactured by RightDose Inc. (OEM) and enable a touch screen monitor to connect to your network (just like a PACs system). This proprietary system interacts with the CT scanner through a secure, precise and fast cloud networking technique.
