

*Sapheneia was the first third-party low dose FDA approved Software Company in the United States. Sapheneia-Scannerside was the first third party company to combine low dose with dose monitoring in the United States. At RSNA 2014, Sapheneia-Scannerside became the first Single Source Solution which included XR-29 Dose Check Upgrades. To date, not all XR-29 Solution Companies can provide Dose Reduction and Custom Protocols once the XR-29 Monitoring indicates your dose levels are too high. To date, no other third party company has been around as long as Sapheneia and no other company has as many systems successfully operating worldwide.*
